◆ The Moving Man Put the position, velocity, and acceleration together and the Moving Man will move! ◆ Graphs • Position (X, Y, and Z position) • Velocity (X, Y, and Z velocity in points/sec) • Acceleration (X, Y, and Z acceleration (your mouse speed divided by time, multiplied by the position) ◆ Mouse Control Move the man with the mouse and plot his motion. ◆ Options ◆ Fuzzy-ness ◆ Rendering ◆ Keys Move the man back and forth with the mouse and plot his motion. You can also control the position, velocity, and acceleration by entering the corresponding values in the app. The Moving Man lets you plot and graph motion. Test your skills with this graph plotting wizard. It makes moving this image on your screen a breeze. The images shown are graphically vector - based. The Moving Man will work for full screen or window mode. This app ships with a number of graphs already drawn. It is easy to add or remove graphs by simply adding another position, velocity, or acceleration. Graphs: Position - The X, Y and Z positions. Velocity - The X, Y and Z velocity. Acceleration - The X, Y and Z acceleration. Use it to test your understanding of: Graph plotting functions (position, velocity, and acceleration) Dynamics (how fast something is moving) Graph plotting and animation (using Graphite) Also includes: Private right mouse button - moves the man in any direction your mouse moves Custom zoom - simple to use. Larger circles will mean a larger view at any zoom level Settings - changing the man's attributes Keyboard - using arrow keys to navigate through options Endless user defined zoom - up to the first 600,000,000 positions Ribbon - showing and hiding the buttons Graph paper - calculating a 4th order polynomial on axis using the mouse position This app does not come with a file or license. It will simply work as long as the image is in the same folder as the application. Files Needed: Graph Paper (JPEG) Windows x86 The Tic-Tac-Toe game for the Mac - play online, compete against friends, or create your own puzzles! The Tic-Tac-Toe game allows you to

Move your little man back and forth. Set the position, velocity, or acceleration and let the simulation move the man for you. The Moving Man is a similar to the physical analog. It's easy to use. Just move the little man back and forth with the mouse and plot his motion. You can even reverse his motion. Vr-Space is a program designed to demonstrate the concept of the virtual cube, a cube that can be manipulated in 3d space, like a cube object in Visual Studio. This utility uses the OpenGL library to make the cube look like it is really there. The axis of rotation is defined with the mouse, and is constrained to three orthogonal points by the virtual corners of the cube. Want to see a dragon that really looks like a dragon but also exists in a game? Well, no one said it had to be a real dragon in this case! Our dragon can fly and has all the relevant head movement and tail waggling! The moving object in this demo is the man. He starts walking but soon gets into a car, and then into a plane, and at some point a rocket. At the end of the animation you will be very impressed and a bit dizzy. SketchUp is a CAD modeling and rendering application of choice for architects, engineers, illustrators, animators, artists and hobbyists. SketchUp comes with a library of 40,000 3D primitives, called "shapes", and a library of 2500 different 2D shapes, called "extrusion". Shapes are formed by extrusion of polygons or multipart curves, and are grouped into families. Shapes can be edited, rotated, positioned, and scaled. You can see where the shape is currently located in the "current view". The "document view" displays the shape's exterior and interior surfaces. The "layered view" displays the shape's parts, in contrast to the "current view" and "document view", which simply display the shape itself. You can "lock", "scale", and "move" parts of the shape. You can see the current part color and the color of the part's fill areas. You can hide or reveal parts of the shape's surface. You can change the shape's "base point", the point where extrusion will start. You can also change the shape's symmetry axis. You can create subtraction models, which
